

### School Health Index Results

The School Health Index (SHI) is a measuring tool created by the CDC for self-assessment of school systems. Because it was created for public schools, and because of the nature of our agency, our scores are lower in spots. This does not indicate poor health, rather points at a measuring tool that does not fit our setting.

**Chosen areas of improvement for Elementary School are:**

Written policies for carry and self administration of quick-relief medications (Module 1, A1)

Essential topics for preventing HIV, other STD, and pregnancy (Module 2, SH1)

Essential topics on asthma awareness (Module 2, A1)

Essential topics on preventing unintentional injuries, violence, and suicide (Module 2, S1)

Healthy food purchasing and preparation practices (Module 4, N3)

**Chosen areas of improvement for Middle School/High School are:**

Staff development on unintentional injuries, violence, and suicide (Module 1, S3)

Professional development on asthma (Module 1, A2)

Licensed physical education teachers (Module 3, PA10)

Physical activity facilities meet safety standards (Module 3, PA 19/S3)

Farm to School activities (Module 4, N11)
